IN THE CLAIMS:

- 1. (Original) A human/machine interface for a machine vision system having an image
- element that generates image data based upon a viewed object comprising:
- a processing element and a memory operatively connected to the image element
- and including (a) a machine vision tool for performing a machine vision process on the
- 5 image data and (b) a software process for compressing and reformatting the image data
- and information from the machine vision tool into a web-browser-compatible form for
- transmission over a communications interface, interconnected to the processing element,
- to a human/machine interface device having a display, the web-browser-compatible im-
- 9 age data and information being adapted for display on the human/machine interface de-
- vice, and wherein the human/machine interface device is adapted to display web-
- browser-compatible image data and the information on a plurality of user-selected
- screens associated with the machine vision tool, and wherein the processing element is
- adapted to perform a machine vision tool task while the human/machine interface device
- is disconnected from the communications interface; and
- wherein the processing element includes a web server and wherein the hu-
- man/machine interface device comprises a computer having a generic web browser and
- the screens comprise web pages.
- 2. (Original) The human/machine interface as set forth in claim 1 wherein the screens in-
- 2 clude buttons for selecting predetermined functions for at least one of installing, config-
- 3 uring, training, monitoring and controlling the machine vision system.
- 3. (Original) The human/machine interface as set forth in claim 1 wherein the software
- 2 process includes a data compression and reformatting process for the image data that
- causes the image data to be transmitted in compressed form over the communications in-
- 4 terface.

4. (Original) A human/machine interface for a machine vision system having an image element that generates image data based upon a viewed object comprising:

a processing element and a memory operatively connected to the image element and including (a) a machine vision tool for performing a machine vision process on the image data and (b) a software process for transmitting the image data and information from the machine vision tool over a communications interface, interconnected to the processing element, to a human/machine interface device having a display, and the image data and information being adapted for display on the human/machine interface device, and wherein the human/machine interface device is adapted to display the image data and the information on a plurality of user-selected screens associated with the machine vision tool, and wherein the processing element is adapted to perform a machine vision tool task while the human/machine interface device is disconnected from the communications interface; and

wherein the human/machine interface device comprises a personal digital assis-

wherein the human/machine interface device comprises a personal digital assistant (PDA).

- 5. (Original) The human/machine interface as set forth in claim 4 wherein the communi-
- 2 cation interface includes support for data transmission to a PDA over one of a wireless
- 3 link and a cable link.

- 6. (Original) The human/machine interface as set forth in claim 4 wherein the hu-
- 2 man/machine interface device includes a generic machine vision application residing
- thereon and the processing element is adapted to install a specialized machine vision ap-
- plication over the communications interface to the human/machine interface device.
- 7. (Original) The human/machine interface as set forth in claim 4 wherein the machine
- vision tool indicates a process that determines an intensity distribution of the image data
- and that transmits information with respect to the determined intensity distribution, and
- wherein the human/machine interface device includes a process for displaying, based
- upon the information, a visual representation of the intensity distribution so as to assist in

- adjusting at least one of lighting intensity, shutter exposure time, lens aperture, and pa-
- 7 rameters affecting the intensity distribution in the image data.
- 8. (Original) The human/machine interface as set forth in claim 4 wherein the machine
- vision tool includes a process that determines a relative degree of focus of the image data
- and that transmits encoded information with respect to the determined relative degree of
- 4 focus, and wherein the human/machine interface device includes a process for displaying,
- based upon the encoded information, a current focus value so as to assist in adjusting fo-
- 6 cus.
- 9. (Original) The human/machine interface as set forth in claim 8 wherein the current fo-
- 2 cus value is displayed as a function of time.
- 10. (Original) The human/machine interface as set forth in claim 8 wherein the hu-
- 2 man/machine interface device includes a display that is insufficient in resolution and re-
- fresh rate to provide a real time display for adjusting either of focus or aperture of lens of
- 4 the image element.
- 11. (Original) The human/machine interface as set forth in claim 4 wherein the software
- 2 process includes a data compression and reformatting process for the image data that
- causes the image data to be transmitted in compressed form over the communications in-
- 4 terface.
- 12. (Original) A method for interfacing with a machine vision system having an image
- element that generates image data based upon a viewed object, the method comprising
- the steps of:
- 4 providing a processing element and a memory operatively connected to the image
- element and including (a) a machine vision tool for performing a machine vision process
- on the image data and (b) a software process for providing the image data in a web-

- browser-compatible form and for creating information for constructing interface web
 pages associated with operation of the machine vision tool;
- transmitting the image data and information over a communications interface, interconnected to the processing element, to a human/machine interface device having a display and a generic web browser application;
 - receiving the image data and information and displaying, on the human machine interface device, the image data and information on a plurality of user-selected screens, each of the screens comprising a web page; and
 - performing, with the processing element, a machine vision tool task while the human/machine interface device is disconnected from the communications interface.
- 13. (Original) The method as set forth in claims 12 wherein further comprising transfer-
- 2 ring configuration information from the human/machine interface device to the memory
- over the communications interface.
- 14. (Original) The method as set forth in claim 13 wherein the step of transferring con-
- 2 figuration information includes providing training information to the memory.
- 15. (Original) The method as set forth in claim 14 wherein the step of displaying includes
- 2 monitoring a live image acquired by the image element based upon the image data and
- 3 information.

12

13

14

15

16

- 16. (Original) The method as set forth in claim 12 further comprising (a) establishing a
- link between the human/machine interface device and the communications interface, (b)
- at least one of installing, configuring, training or monitoring the machine vision system
- by exchanging information over the link; and (c) removing the link.
- 17. (Original) The method as set forth in claim 16 wherein the step of establishing the
- link comprises opening web pages on the human/machine interface based upon a web

- 3 server in the machine vision system that interacts with the communications interface to
- 4 convert the image data and information into web-based data pockets.
- 18. (Original) The method as set forth in claim 12 further comprising communicating
- 2 control information to a remote device through the communication interface so as to di-
- rect a device function in accordance with the predetermined instruction of the machine
- 4 vision tool.
- 19. (Original) The human/machine interface as set forth in claim 12 wherein the software
- 2 process includes a data compression and reformatting process for the image data that
- causes the image data to be transmitted in compressed form over the communications in-
- 4 terface.
- 20. (Original) A method for interfacing with a machine vision system having an image
- element that generates image data based upon a viewed object, the method comprising
- 3 the steps of:
- providing a processing element and a memory operatively connected to the image
- element and including (a) a machine vision tool for performing a machine vision process
- on the image data and (b) a software process for providing the image data in a transmitta-
- ble form and for creating information for constructing interface screens associated with
- 8 operation of the machine vision tool;
- transmitting the compressed and reformatted image data and information over a
- communications interface, interconnected to the processing element, to a human/machine
- interface device, the human/machine interface comprising a personal digital assistant
- (PDA) having a display and a graphical user interface (GUI);
- receiving the compressed and reformatted image data and information and dis-
- playing, on the human machine interface device, the compressed and reformatted image
- data and information on a plurality of user-selected screens associated with the machine
- vision tool; and

- performing, with the processing element, a machine vision tool task while the human/machine interface device is disconnected from the communications link.
- 21. (Original) The method as set forth in claim 20 wherein the step of transmitting in-
- 2 cludes providing the image data and information over one of a wireless link and a cable
- 3 link.
- 22. (Original) The method as set forth in claim 20 further comprising (a) establishing a
- link between the human/machine interface device and the communications interface, (b)
- at least one of installing, configuring, training or monitoring the machine vision system
- by exchanging information over the link; and (c) removing the link.
- 23. (Original) The method as set forth in claim 20 further comprising transferring a ma-
- 2 chine vision application from the memory over the link to the human machine interface
- device and installing the loadable machine vision application on the human/machine in-
- 4 terface so as to interface with the machine vision system using the loadable machine vi-
- 5 sion application.
- 24. (Original) The method as set forth in claim 20 further comprising communicating
- 2 control information to a remote device through the communication interface so as to di-
- rect a device function in accordance with a predetermined instruction of the machine vi-
- 4 sion tool.
- 25. (Original) The human/machine interface as set forth in claim 20 further comprising
- determining, with the machine vision tool, an intensity distribution of the image data and
- transmitting information with respect to the determined intensity distribution, and dis-
- 4 playing, based upon the information, a visual representation of the intensity distribution
- with the human/machine interface device so as to assist in adjusting at least one of light-
- 6 ing intensity, shutter exposure time, lens aperture, and parameters affecting the intensity
- 7 distribution in the image data.

- 26. (Original) The human/machine interface as set forth in claim 20 further comprising
- determining, with the machine vision tool, a relative degree of focus of the image data
- and transmitting encoded information with respect to the determined relative degree of
- focus, and displaying, based upon the encoded information, a current focus value with the
- human/machine interface device so as to assist in adjusting focus.
- 27. (Original) The human/machine interface as set forth in claim 26 wherein the step of
- displaying the current focus value includes displaying the current focus value as a func-
- 3 tion of time.
- 28. (Original) The human/machine interface as set forth in claim 20 wherein the software
- 2 process includes a data compression and reformatting process for the image data that
- causes the image data to be transmitted in compressed form over the communications in-
- 4 terface.
